

How to install the waistcoat kit

What you'll need:

- A Sharpie
- Tweezers
- Needle or other sharp pointed tool

1. Remove each waistcoat sticker from the backing. Using the sharpie, run the outside edge of each piece along the side of the Sharpie tip. Otherwise, the white edge will show.

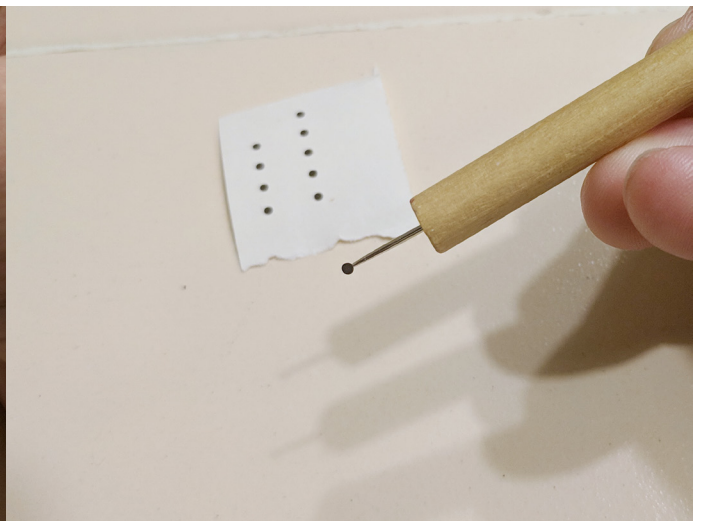

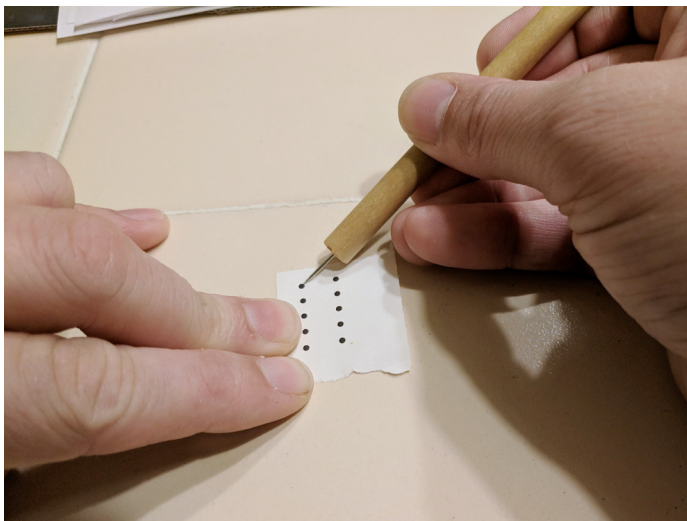

2. Using the tweezers, slip left piece (without buttons) under the coat and stick it down when in place. The notch in the waistcoat piece fits around a tab under the figure's coat. Once it's in place, stick it down with a finger and hold it while you unstick your tweezers.

Use an up-and-down motion while sliding the piece in so it doesn't stick before it's in place. It may stick anyway but don't worry, just unstick it and try again.

3. Repeat step 2 with the other piece. You may find it easier to turn your figure upside-down for this step so that you'll still be using the tweezers with your dominant hand.

4. Using your needle or other sharp tool, pick up a button with the point. Carefully place the button on one of the gray markers. Press down with your finger then slide the needle out leaving the button behind. Repeat for the other buttons.

That's all there is to it!
